Question-1:

Build a python code, Assume you get temperature and humidity values (generated with random functions to a variable) and write a condition to continuously detect alarm in case of high temperature.

Solution :

```
'''
Let us consider normal temperature=40 Celsius and normal humidity=65%
'''
import random
Temperature=random.randint(1,100)
Humidity=random.randint(1,100)
print("Temperature:") print(Temperature)
print("Humidity:") print(Humidity)
if((Temperature>40)&(Humidity>65)):
 print("Values are HIGH!!! ")
print("ALERT")
if((Temperature>40)&(Humidity<65)):
print("Tempertaure Value is HIGH!!! ")
print("Check Temperature")
if((Temperature<40)&(Humidity>65)):
print("Humidity Value is HIGH!!! ")
print("Check Humidity")
if((Temperature<40)&(Humidity<65)):
print("All Values are in limit!!! ")
 print("SAFE ZONE")
```

Output :

```
'''
Let us consider normal temperature=40 Celsius and normal humidity=65%
'''
import random
Temperature=random.randint(1,100)
Humidity=random.randint(1,100)
print("Temperature:")
