Question-1:

Build a python code, Assume you get temperature and humidity values (generated with random functions to a variable) and write a condition to continuously detect alarm in case of high temperature.

Solution :

'''

Let us consider normal temperature=40 Celsius and normal humidity=65%

'''

```python
import random

Temperature=random.randint(1,100)

Humidity=random.randint(1,100)

print("Temperature:")

print(Temperature)

print("Humidity:") print(Humidity)

if((Temperature>40)&(Humidity>65)):

 print("Values are HIGH!!! ")

print("ALERT")

if((Temperature>40)&(Humidity<65)):

print("Tempertaure Value is HIGH!!! ")

print("Check Temperature")

if((Temperature<40)&(Humidity>65)):

print("Humidity Value is HIGH!!! ")

print("Check Humidity")

if((Temperature<40)&(Humidity<65)):

print("All Values are in limit!!! ")

 print("SAFE ZONE")
```

Output :

```
1  '''
2  Let us consider normal temperature=40 Celsius and normal humidity=65%
3  '''
4  import random
5  Temperature=random.randint(1,100)
